

Corn Gluten Fertilizer

Leaders in Organics

FERTILIZER FOR LAWNS AND GARDENS

Corn Gluten Fertilizer is an all-natural plant product made from corn gluten, a dried protein separated from corn during the manufacture of starch for the food industry. Corn gluten is a common ingredient in pet food.

Safe for people and pets

Unlike synthetics, children and pets can play on the lawn immediately after and even *during* application of Corn Gluten Fertilizer. This Product will not contaminate groundwater, ponds, or your pets drinking bowls. It is harmless to plants with an established root system, such as flowers, vegetables, and ornamentals. Rain following application will not wash this product away or reduce its effectiveness. This product will not harm beneficial insects or soil organisms.

Don't Worry!

Children and pets can play on the lawn immediately after and even during application of Corn Gluten Fertilizer.

It's a fertilizer

Corn Gluten Fertilizer is an excellent source of slow-release nitrogen and contains 9% nitrogen by weight. When spread on a lawn at the recommended rate of 20lb/1,000 square feet three times a year, the Corn Gluten Fertilizer provides 4lb of nitrogen/1,000 square feet. The nitrogen is released as micro organisms break down.

With Corn Gluten Fertilizer in the soil. If you wish to feed phosphorous and potassium to your lawn without adding excessive nitrogen, use a low-nitrogen, starter-type fertilizer 2 to 3 weeks after applying Corn Gluten Fertilizer.

Corn Gluten Organic Fertilizer

Easy-to-spread pellets

Corn Gluten is produced as a fine powder. In manufacturing Corn Gluten Fertilizer Grain Processing Corporation takes an extra step to turn it into small pellets. These are easier and cleaner to spread than a powder.

Corn Gluten Fertilizer

is easy to spread, and there's no need to wear protective clothing, like with many synthetic chemicals.

Spring Application for lawns

Apply 20 lb/1,000 square feet in early spring. Use a drop or cyclone-type spreader. Do not worry about over application. This product will not burn your lawn even if you significantly exceed 20 lb/1,000 square feet. Water in deeply, then allow to dry out completely. The effectiveness of this product will be compromised if the lawn is continuously wet, as with an under ground irrigation system.

Summer Application for lawns

Apply Corn Gluten Fertilizer 20lb/1000 square feet and water deeply, then allow to dry out completely.

Fall Application for lawns

Apply 20lb/1000 square feet and water deeply, then allow to dry out completely.

Storage

Store under dry conditions.

Spread **Corn Gluten Fertilizer** onto lawn, water it deeply, and let it dry out. That's all there is to it.

The main ingredient in **Corn Gluten Fertilizers** commonly used in pet food. No need to keep Fido off the lawn!
